Work Experience

Dubai Courts — **July 2011 – Current**

Senior Information Security Officer — **June 2016 – Current**

Support Dubai Courts and Government of Dubai by leading the Information Security and shape the security directives, security awareness, implementation plans and day to day operations. In addition, I provide the required Information Security support to the leadership of Dubai Courts, relevant stakeholders and end users. I also perform the following duties and responsibilities:

- Lead the SIEM Solution and monitor the real time analysis of security alerts, malicious activity generated by relevant applications and networks hardware.
- Develop and implement the information security policies, standards and other technical requirement documents needed to enhance the information security in coordination with relevant stakeholders.
- Protect Dubai Courts related systems by defining access privileges, control structures, and resources in coordination with the respective stakeholder.
- Develop and implement the processes and procedures that guide the management and end users how to protect the organization's physical and information technology.
- Review the active directory in terms of user access controls and policies implemented.
- Conduct awareness sessions and workshops for the employees in order to educate the employees about the policies and procedures implemented for areas related to the information security and what how to prevent a threat.
- Review the usage of network and system application.
- Develop and maintain strong relationship with the team and work closely to enhance the system, process and procedures, and information security policies.
- Recognize issues that could harm the security or lead to threat the system in place by identifying abnormalities, and reporting violations if any.
- Implement security improvements by assessing current situation, evaluating trends, and anticipating requirements.
- Determine security violations and inefficiencies by conducting periodic audits.
- Maintain quality service by following ISR standards.
- Maintain technical knowledge by attending security awareness and educational workshops.

Network Officer **July 2011 – May 2016**

- Work with the team to create network specifications. This includes analyzing processes, access, security requirements and interface configuration and routing protocols.
- Evaluate network performance challenges and issues and collaborate with network architects on network optimization to tackle the issues encountering.
- Ensure the performance of the network is maintained by carrying out network monitoring and analysis including troubleshooting network problems and outages, and lease with the relevant vendors to solve the problem.
- Ensure the network system is secured by putting in place relevant policies and procedures.
- Design and implement new solutions and improve resilience of the current environment.
- Undertake data network fault investigations in local environments.
- Monitor, support and administer the firewall environments.
- Upgrade data network equipment and update the patches to the latest stable firmware releases.
- Configure routing and switching equipment, hosted IP voice services and firewalls.
- Provide support to end users in case of any network issue occurred.

Dunia Finance / Information Technology Department **Oct 2009 – November 2013**

- Supporting Users for technical related.
- Following up with systems and tasks.
- Configure network devices (routers and switches)
- Give trainings for new employees.
- Installing data center devices.
- User access control (add and revoke).
