MEDICAL EVALUATION

DATE: 10 October 2018

This report is dictated at the request of the patient's family.

Hala Altaylouni is a 14 -year-old female patient known to have Down syndrome status post gallbladder excision due to stones. She is also known to have hearing problem post myringotomy with tube insertion three times before. Currently, she has good hearing bilaterally. Regarding her vision, she has astigmatism for which he is wearing glasses. She has constipation however does not require any medication.

Her thyroid and celiac screen done in 2016 were normal. Today, she came for a visit at the Down syndrome clinic at Sheikh Khalifa Medical City. The child is advanced regarding her developmental skills in comparison to other patients with Down syndrome. She is attending grade 8. The child speaks fluently however she has some pronounciation problem with certain letter; otherwise, it is a very intelligent speech. She is able to write both in Arabic and English and she has a very pleasant character and very intelligent interaction when we talked to her.

The patient can attend a normal school; however, we highly advised to tailor the curriculum in order for the patient to be able to cope with the curriculum since most of patients with Down syndrome have some IQ limitation.

In summary, Hala is a 14 -year-old female patient with Down syndrome. She has advanced developmental skills, motor and fine motor and language in comparison to other patients with Down syndrome. She is at grade 8 performing well for her condition. We highly advised to continue her at normal school but the curriculum should be slightly tailored to her condition.
