

OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE

WASHINGTON, DC 20301-1200

NOV 3 0 2016

HEALTH AFFAIRS

MEMORANDUM FOR UNDER SECRETARY OF DEFENSE (COMPTROLLER)

SUBJECT: Fiscal Year 2017 Direct Care Inpatient Billing Rates

The attached document contains the Department of Defense Uniform Business Office (UBO) Fiscal Year (FY) 2017 Direct Care Inpatient Billing Rates. These rates are effective October 1, 2016. The Defense Health Agency (DHA) requests that this package be posted to the Comptroller's Website (http://comptroller.defense.gov/Portals/45/documents/rates/fy2017/2017_ia.pdf) as FY 2017 Direct Care Inpatient Billing Rates.

These rates are used when billing for medical services furnished to inpatients at Military Treatment Facilities. The Adjusted Standardized Amounts (ASAs) are based on an indexing methodology that aligns with changes in TRICARE institutional and professional services reimbursement rates. The overall change in direct care ASAs from FY 2016 to FY 2017 is a 2.86 percent increase that reflects the average TRICARE increase in reimbursement over an eleven-year (FY 2006 - FY 2016) indexing period.

The point of contact for this action is Ms. DeLisa Prater, Program Manager, DHA, UBO. She may be reached at (703) 681-6757, or delisa.e.prater.civ@mail.mil.

A handwritten signature in black ink, appearing to read "Karen Guice", is positioned above the typed name and title.

Karen Guice, M.D., M.P.P.
Principal Deputy, Performing the Duties
of the Assistant Secretary of Defense (Health Affairs)

Attachment:
As stated

**Fiscal Year 2017
Direct Care Inpatient Adjusted Standardized Amounts
Rates and Guidance**

1.0 Fiscal Year 2017 Direct Care Inpatient Adjusted Standardized Amount Rates and Charges effective 1 October 2016.

Overview

The Fiscal Year (FY) 2017 direct care inpatient Adjusted Standardized Amounts (ASA) rates are computed based on the Military Health System (MHS) direct care standardized cost to provide a single Medicare Severity Relative Weighted Product (MS-RWP). The MS-RWP is a Medicare Severity Diagnosis Related Group (MS-DRG) based measure of the relative costliness of a given discharge. The average standardized cost per MS-RWP for hospitals in locations with area wage rates greater than 1.0, less than or equal to 1.0, and overseas are published annually as inpatient ASAs shown in Table 1. This approach maintains compatibility with both Medicare and TRICARE ASA policies. The ASA rates will be applied to the MS-RWP for each inpatient case, determined from the TRICARE MS-DRG weights, outlier thresholds, and payment rules to calculate the reimbursement charge. The Department of Defense (DoD) publishes this data annually for hospital reimbursement rates under TRICARE/Civilian Health and Medical Program of the Uniformed Services pursuant to 32 Code of Federal Regulations 199.14(a)(1). Due to data system limitations, for Military Treatment Facilities (MTFs), direct care adjustments are made for length of stay (LOS) outliers rather than high cost outliers.

Table 1 provides the average direct care inpatient ASA rates for third party billing, interagency billing and International Military Education and Training (IMET) billing for three core-based statistical areas (CBSA) (high area wage index, low area wage index, and overseas).

Table 1. Average FY 2017 Direct Care Inpatient ASA Rates

Wage Index	Average IMET Rate	Average Interagency Rate (IAR)	Average Full/TPC Rate
Area Wage Index > 1.00	\$7,396.43	\$11,555.33	\$12,191.74
Area Wage Index ≤ 1.00	\$8,167.68	\$11,925.75	\$12,625.19
Overseas ^	\$7,625.79	\$16,520.78	\$17,346.48

^ Hawaii and Alaska are not considered overseas for billing purposes.

The IMET program is a key funding component of U.S. security assistance that provides training on a grant basis to students from allied and friendly nations. Authority for the IMET program is found pursuant to Chapter 5, part II, Foreign Assistance Act 1961. Funding is appropriated from the International Affairs budget of the Department of State. Not all foreign national patients participate in the IMET program. The IAR ASA rates are used to bill other federal agencies.

The full/Third Party Collection (TPC) ASA rates are used to bill insurance carriers, pay patients, and other payers.

Each MTF providing inpatient care has its own applied ASA rates (shown in Appendix A). The MTF-specific ASA rates are the average ASA rates adjusted for indirect medical education costs, if any, for the discharging hospital. The product of the discharge specific MS-RWP and the MTF-applied ASA rate is the charge submitted on the claim and is the amount payers will use for reimbursement purposes. The individual ASAs are published on the Defense Health Agency (DHA) Uniform Business Office (UBO) Website (<http://health.mil/Military-Health-Topics/Business-Support/Uniform-Business-Office>). Examples of how to calculate the reimbursement charge are shown in Section 2.0.

The ASA per MS-RWP used in the direct care system is comparable to procedures used by the Centers for Medicare and Medicaid Services (CMS) and TRICARE. The expenses represented by the ASAs include all direct care expenses associated with direct inpatient care. The inpatient ASAs includes the cost of both inpatient professional and institutional services. The ASA rates apply to reimbursement from TPC, IMET and IAR payers. Pursuant to the provisions of 10 United States Code (U.S.C.) 1095, the breakdown of total inpatient charges is 93 percent for institutional charges and 7 percent for professional charges. When preparing bills for inpatient services, professional fees are based on the privileged provider services. The hospital institutional fees are based on the costs for support staff, facility costs, ancillary services, pharmacy, and supplies.

MTFs without inpatient services, whose providers perform inpatient care in a civilian facility for a DoD beneficiary, may bill payers the percentage of the ASA/MS-RWP based charge that represents professional services. In the absence of a MTF-applied ASA rate for the facility, the ASA rate used will be based on the average for the type of CBSA in which the MTF is located - areas with wage rate indices greater than 1.0, less than or equal to 1.0, or overseas. The MTF UBO must receive documentation of care provided in order to produce an appropriate bill.

1.1 Family Member Rate (FMR)

The FY 2017 FMR is \$18.20 per day. The FMR is established by authority of 10 U.S.C., Section 1078.

2.0 Examples Applying ASAs to Compute Inpatient Stay Charges

The cost to be recovered is the product of the MTF applied ASA rate and the MS-RWPs specific to the inpatient medical services provided. This includes the costs of both inpatient institutional and professional services. Billing in the examples below is at the full/TPC rate.

For each MS-DRG, TRICARE establishes short stay and long stay thresholds. An inlier is any discharge with a LOS greater than the short stay threshold, equal to or less than the

long stay threshold. An outlier is any discharge with a LOS less than or equal to the short stay threshold or greater than the long stay threshold. Example charge computations are provided below for inlier, outlier, and transfer discharges. The full list of TRICARE MS-DRGs with MS-DRG case weights, long stay thresholds, short stay thresholds and other information is provided by accessing the MHS UBO Site located on the MHS Secure Site LaunchPad available to authorized UBO Service representative users with a Government Common Access Card.

Table 2 provides the information used in the billing examples for a non-teaching hospital (DMIS ID 0098—Army Community Hospital Reynolds - Sill) in an Area Wage Index \leq 1.00 location for a discharge in MS-DRG 765—Cesarean section with complications and comorbidities/major complications and comorbidities (CC/MCC). For this example, FY 2016 TRICARE weights (updated 11/11/15) are used since the FY 2017 weights are not yet available.

Table 2. Third Party Billing Examples

MS-DRG Number	MS-DRG Description	MS-DRG Weight	Arithmetic Mean LOS	Geometric Mean LOS	Short Stay Threshold	Long Stay Threshold
765	Cesarean section with CC/MCC	0.8723	4.1	3.5	1	15

Hospital	Wage Index	Area Wage Rate Index	IME Adjustment	Group ASA	MTF-Applied TPC ASA
ACH Reynolds – Sill	Area Wage Index \leq 1.0	0.8017	1.0	\$12,625.19	\$11,729.88

	Length of Stay (LOS)	Days Above Threshold	Relative Weighted Product (RWP)			TPC Amount
			Inlier	Outlier/Transfer	Total	
#1	7 days	0	0.8723	0	0.8723	\$10,231.97
#2	21 days	6	0.8723	0.4935	1.3658	\$16,020.67
#3	1 day	0	0.8723	0.4255	0.4255	\$4,991.06
#4	2 days	0	0.8723	0.7477	0.7477	\$8,770.43

Example #1 provides an example of the charge for an inlier LOS discharge in MS-DRG 765. The MS-RWP for an inlier case is the TRICARE MS-DRG weight of 0.8723. The MS-DRG weight used in these examples is the FY 2016 TRICARE DRG weight, as updated. The charge is the product of the MS-RWPs and the MTF-Applied ASA rate.

- a) The FY 2017 MTF-Applied TPC ASA rate is \$11,729.88 (Army Community Hospital Reynolds – Sill’s TPC rate as shown in Appendix A).
- b) The MTF amount to be recovered is the MS-DRG weight (0.8723) multiplied by the MTF-Applied TPC ASA (\$11,729.88).
- c) The inlier cost to be recovered is \$10,231.97 as computed below.
 TPC Amount Billed: MTF-Applied TPC ASA rate multiplied by the MS-DRG weight
 $= \$11,729.88 * 0.8723 = \$10,231.97$

Example #2 provides the example of the charge for a long stay LOS outlier discharge in MS-DRG 765. The total MS-RWP for a long stay LOS outlier case is a combination of the TRICARE MS-DRG weight plus additional MS-RWP credit for each day that the LOS exceeds the Long Stay Threshold. The charge is determined by multiplying the total MS-RWPs by the MTF-Applied ASA rate.

- a) For the long stay LOS outlier MS-RWP value calculation, 33 percent of the per diem weight is multiplied by the number of outlier days. The number of outlier days is computed as the actual LOS minus the Long Stay Threshold. For long stay outliers, per diem weight is determined by dividing by the MS-DRG weight by the Geometric Mean LOS.
- b) Long stay LOS Outlier MS-RWP value calculation
 $= .33 * (\text{MS-DRG Weight} / \text{Geometric Mean LOS}) * (\text{Patient LOS} - \text{Long Stay Threshold})$
 $= .33 * (0.8723 / 3.5) * (21 - 15)$
 $= .33 * .24923 \text{ (carry out to five decimal places)} * (21 - 15)$
 $= 0.08225 \text{ (carry out to five decimal places)} * 6$
 $= 0.4935 \text{ (carry out to four decimal places)}$
- c) The total MS-RWP is the MS-DRG weight (0.8723) added to the LOS outlier MS-RWP value.
 $\text{Total MS-RWP} = 0.8723 + 0.4935 = 1.3658$

- d) The MTF amount to be recovered is the MTF-Applied TPC ASA rate (\$11,729.88) multiplied by the total MS-RWP.

$$\begin{aligned} \text{TPC Amount Billed: MTF-Applied TPC ASA rate} & * \text{ Total MS-RWP} \\ = \$11,729.88 * 1.3658 & \\ = \$16,020.67 & \end{aligned}$$

Example #3 provides the example of the charge for a short stay LOS outlier discharge in MS-DRG 765. The MS-RWP for a short stay LOS outlier case is the smaller of (1) twice a per diem MS-RWP allowance, or (2) the MS-DRG weight. The charge is determined by multiplying the total MS-RWPs by the MTF-Applied ASA rate.

- a) For the short stay LOS outlier MS-RWP value calculation, determine the minimum of two times the per diem weight multiplied by the LOS. For short stay outliers, per diem weight is determined by dividing by the MS-DRG weight by the arithmetic mean LOS.

- b) Short stay LOS Outlier MS-RWP value calculation

$$\begin{aligned} &= \text{minimum } (2 * (\text{MS-DRG Weight} / \text{Arithmetic Mean LOS}) * \text{Patient LOS}), \text{ MS-DRG Weight} \\ &= \text{minimum } (2 * (0.8723 / 4.1) * 1), 0.8723 \\ &= \text{minimum } (2 * .21276 \text{ (carry out to five decimal places)} * 1), 0.8723 \\ &= \text{minimum } (0.4255 \text{ (carry out to four decimal places)}), 0.8723 \\ &= 0.4255 \end{aligned}$$

- c) The MTF amount to be recovered is the MTF-Applied TPC ASA rate (\$11,729.88) multiplied by the short stay LOS Outlier MS-RWP.

$$\begin{aligned} \text{TPC Amount Billed: MTF-applied TPC ASA rate} & * \text{ Short Stay LOS Outlier MS-RWP} \\ = \$11,729.88 * 0.4255 & \\ = \$4,991.06 & \end{aligned}$$

Example #4 provides the example of the charge for a transfer discharge in MS-DRG 765. The MS-RWP for a transfer case is the lesser of (1) twice a per diem MS-RWP allowance plus the (LOS -1) multiplied by the per diem, or (2) the MS-DRG weight. The charge is determined by multiplying the total MS-RWPs by the MTF-applied ASA rate.

- a) For the transfer MS-RWP value calculation, determine the minimum of two times the per diem weight plus the LOS minus one multiplied by the per diem weight. For transfers, per diem weight is determined by dividing by the MS-DRG weight by the geometric mean LOS.

b) Transfer MS-RWP value calculation

$$\text{Per Diem Weight} = \text{MS-DRG Weight} / \text{Geometric Mean LOS}$$

$$= 0.8723 / 3.5$$

$$= .24923 \text{ (carry out to five decimal places)}$$

$$= \text{minimum} (2 * \text{Per Diem} + (\text{Patient LOS} - 1) * \text{Per Diem}), \text{MS-DRG Weight}$$

$$= \text{minimum} (2 * .24923 + (2-1) * .24923), 0.8723$$

$$= \text{minimum} (2 * .24923 + 1 * .24923), 0.8723$$

$$= \text{minimum} (.49846 + .24923 \text{ (carry out to five decimal places)}), 0.8723$$

$$= \text{minimum} (0.7477 \text{ (carry out to four decimal places)}), 0.8723$$

$$= 0.7477$$

c) The MTF amount to be recovered is the MTF-applied TPC ASA rate (\$11,729.88) multiplied by the transfer MS-RWP.

$$\text{TPC Amount Billed: MTF-applied TPC ASA rate} * \text{Transfer MS-RWP}$$

$$= \$11,729.88 * 0.7477$$

$$= \$8,770.43$$
